# Circle String from HK Tangler for your Inktober pleasure!
Please note this document is meant as an accompaniment to
[the video on my Vimeo channel](), not as a standalone instruction

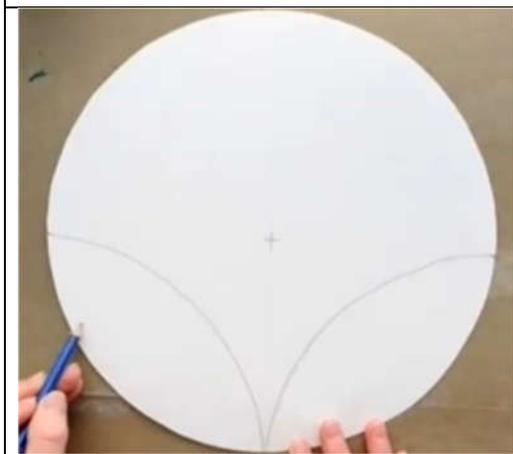

|		
1) Find the largest frying pan or pot you can for the size paper you have. My pad is 12 x 16. This is an 11.5 inch frying pan. 2) Trace it in pencil.	3) Cut it out 4) Mark the center of the tile with a ruler 5) Draw a vertical line bisecting the circle in half. My pencil is super light and hard to see but its there.	6) Lay your ruler down across the tile, perpendicular to your vertical line with the ruler crossing the edge of the tile roughly at the 9 o'clock and 3 o'clock positions 7) Mark dots there.

|		
4) Draw convex curves from those dots to the bottom center of the tile as shown. Don't worry if they exactly where you want them. You will have a chance to make adjustments when you are finished.	5) Draw another pair of arcs below the first two. Also meeting at the center bottom point.	6) Draw a dot on the vertical line about halfway between the center of the tile and the bottom center converging point.

7) Draw two lines down making a diamond shape as shown.

8) Draw a pair of arcs from the center point of the tile down to the bottom, roughly auring the diamond.

9) Draw the top two thirds of a rice shape starting from the center mark on the tile and curving down

10) Draw a dot about three quarters of the way up between the top of the highest diamond and the top of the tile.

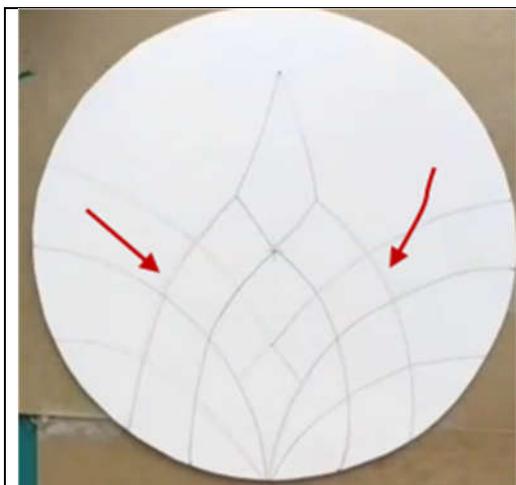

11) Draw a V shape. Bring the points of the V out so that they are in a vertical line with the outside points of the other diamonds beneath it.

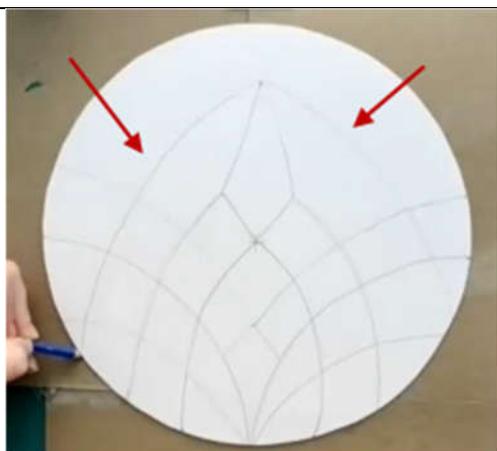

12) Connect the upper dot to the outside of the sides of the v to create a "necktie shaped" diamond

14) Draw another pair of Auras around your "rice shape"

15) And another aura this time from the top of the uppermost diamond

16) Draw a line from the top corner of the diamond to the border of the tile

17) Erase the center lines from the three diamonds

18) Cut the big top sections in half with another line that lines up with the aura that contains lower rice shape

Your tile has 33 sections. You can choose to delete two lines to get down to 31 or you can put your chop in one section and the date in another

I hope you enjoyed!
